🔗 <https://www.voidall.com/>

Software Engineer with **6+ years of production engineering experience** and deep hands-on expertise in **Generative AI, multimodal systems, and cloud-deployed AI applications**. Proven track record building **LLM-powered pipelines, agent-like AI workflows, and computer vision systems**, and deploying them as scalable, user-facing products. Strong foundation in **enterprise backend engineering (Zoho CRM)** combined with modern **Python-based AI stacks**, containerization, and end-to-end SDLC ownership.

🧠 Skills

- Python
- REST APIs
- Microservices
- PostgreSQL / MySQL
- Docker
- LLM Orchestration
- Multimodal AI pipelines
- FastAPI
- Java
- CI/CD

📁 Work Experience

Software Engineer, Freelancer

05/2024 – present
India

Applied Generative AI & Agent-like Systems

- Designed and deployed **end-to-end GenAI pipelines** for automated video ad creation, combining LLM reasoning, semantic asset selection, speech synthesis, and video rendering.
- Built **multi-stage AI workflows** that function as task-oriented agents: *content analysis* → *script generation* → *asset matching* → *assembly* → *evaluation*.
- Implemented **LLM-driven semantic indexing** of 100+ video assets to enable context-aware retrieval and automated decision making.
- Integrated speech-to-text (OpenAI Whisper, Google STT) and TTS engines into production AI pipelines.

Computer Vision Systems

- Trained and deployed **YOLO-based object detection models** for comic panel extraction with ~90% accuracy.
- Built batch inference pipelines and OpenCV post-processing for production usage.
- Delivered full-stack deployment (FastAPI + React) for end users.
- <https://jebin2-comic-panel-extractor.hf.space/> 🔗

Production AI Deployment

- Containerized AI services using Docker with isolated runtime dependencies.
- Deployed AI web applications on Hugging Face Spaces and self-hosted environments.
- Designed reusable, modular AI components enabling faster experimentation and scaling.

Software Engineer, Zoho Corporation

07/2018 – 05/2024
Chennai, India

- Built and maintained **enterprise grade backend systems** for Zoho CRM serving millions of users.
- Designed RESTful APIs, optimized PostgreSQL/MySQL queries, and implemented Redis-based caching layers.
- Automated build and deployment workflows using shell scripting and CI pipelines.
- Developed internal developer tools (IntelliJ IDEA & VS Code plugins) to standardize environments and improve productivity.
- Collaborated closely with product managers, QA, and cross-functional engineering teams.
- Mentored junior engineers and contributed to engineering best practices.

Software Engineer (Internship), Karomi Technologies

12/2017 – 07/2018
Chennai, India

- Developed backend services and APIs using ASP.NET [↗](#) for logistics systems
- Implemented data processing and file automation workflows
- Built and maintained desktop and server-side applications
- Debugged production issues and supported system stability

Projects

GenAI Video Creation Platform

- Automated 15-second ad video generation using LLM reasoning, semantic retrieval, STT/TTS, and FFmpeg.
- Reduced manual video creation effort to a single prompt-driven workflow.

Unified Text-to-Speech Inference System

- Multi-engine TTS platform with runtime model switching and streaming inference.
- Designed for low cold-start latency and scalable deployment.
- <https://github.com/jebin2/TTS> [↗](#)

Offline Subtitle Generation Tool (SRTify)

- Fully offline Whisper-based transcription system with cross-platform desktop deployment.
- <https://jebin2.github.io/SRTify/> [↗](#)

Education

B.E Computer Science, Velammal Engineering College

08/2014 – 08/2018
Chennai, Tamil Nadu

- Served as Placement Coordinator for the graduating class, coordinating campus recruitment activities
- Won individual debugging challenge at technical symposium
- Developed Android utility applications using Java as academic projects
- Built quiz application for aptitude testing and campus placement preparation
