🔗 <https://www.voidall.com/>

Software Engineer with **5+ years of experience in Java and backend development**, and **1.5+ years focused on applied Generative AI and computer vision**. Hands-on in building **LLM-powered workflows, multimodal AI pipelines, and AI-assisted automation tools**, combining strong engineering fundamentals with modern AI capabilities.

## 🧠 Skills

Java • Python • Javascript • PostgreSQL • ReactJS • REST APIs • Model Training Workflows • Workflow Automation • Computer Vision (YOLO) • Backend Development • Multimodal AI Pipelines

## 📁 Work Experience

### Applied Generative AI Engineer, *Freelancer*

05/2024 – present  
India

- **Comic Panel Extraction System (Computer Vision, YOLO)** - Implemented an object detection workflow for comic panel extraction, including **dataset annotation, YOLO model training, evaluation, and inference-based image extraction**. <https://jebin2-comic-panel-extractor.hf.space/> 🔄
- **GenAI-based Ad Video Creation Pipeline (Brand Marketing Use Case)**, Designed and implemented an AI-assisted workflow to generate short brand ads by semantically analyzing stock videos with LLMs, generating voiceover scripts, and assembling matched clips into final promotional videos.
- **Additional GenAI tools including** - LLM-based content analysis, client-side generative image animation, speech-to-text transcription using Whisper.
- <https://www.voidall.com/animateimage/> 🔄 <https://jebin2.github.io/SRTify/> 🔄

### Software Engineer, *Zoho Corporation*

07/2018 – 05/2024  
Chennai, India

- Developed and optimized web applications using Java, JavaScript, and the internal Lyte framework
- **Automated build generation** and deployment processes using custom shell scripts, improving development process.
- **Led the configuration and integration of VSCode and IntelliJ IDEs** for internal software development, improving developer productivity.
- Collaborated with cross-functional teams to design intuitive user interfaces and back-end systems.
- Optimized queries in PostgreSQL and MySQL, reducing database response time.
- **Mentored junior developers** and provided hands-on training to enhance team skills.
- Developed **audit tools** using Node.js and Next.js, streamlining internal review processes for the company.

- Developed and automated **IntelliJ** and **VSCode** plugins for internal use, significantly improving team-wide development workflows and reducing setup time.

#### Software Engineer, Karomi Technologies

12/2017 – 07/2018

Chennai, India

- Designed and implemented APIs and back-end services using ASP.Net , improving system performance.
- Developed a **Windows-based FTP application**, automating file transfers and reducing manual intervention.
- Conducted code reviews and debugging sessions to ensure quality and performance across projects.

## Education

#### B.E Computer Science, Velammal Engineering College

08/2014 – 08/2018

- Placement Coordinator for the class of 2018.
- Participated in Symposium and won in debugging challenge.
- Developed Android Application and Aptitude testing application in 3rd year. <https://github.com/RahulSriram/Care>, <https://github.com/jebin2/GoAnyWhere>

## Projects

#### Custom IDE Integration - (Zoho)

- Developed and automated **IntelliJ** and **VSCode** plugins for internal use, significantly improving team-wide development workflows and reducing setup time.

#### Thirukural WordVector

- Developed Word similarity specific to Thirukural.
- Custom Tokenization
- Used Binary CrossEntropy, Skip-gram with Negative Sampling, SGNS and SGD optimiser
- <https://github.com/jebin2/KuralGPT> 

#### Currency Rates

- **Currency Rates** - Built a PWA that integrates the **OpenExchangeRates API** to deliver real-time currency conversion across multiple currencies. <https://jebin2.github.io/currency> 

#### SVGIFY

- Convert any svg into Image format.
- Support MathML, Resize
- <https://jebin2.github.io/svgify> 

#### Paper – Secure Client-side Notepad

A privacy-focused note application using client-side encryption, automatic data expiry, and zero server-side access to plaintext notes. <https://jebin2-paper.hf.space/>
