📁 WORK EXPERIENCE

Zoho Corporation, Software Engineer

07/2018 – 05/2024

- Built and scaled an **online booking system** handling **10,000+ daily users and bookings**, replacing a legacy system with **lazy-loading architecture** (day-wise prioritized fetch instead of bulk 7-day loads).
- **Reduced database load by introducing Redis-based caching**, eliminating redundant queries across repeated user sessions
- Improved **client-side performance to <200ms load times** by introducing lazy loading and eliminating unnecessary memory usage.
- Designed and implemented an **automated database schema validation tool**, reducing audit time from **hours to <5 minutes**, and enabling **self-service validation for 60+ developers**.
- Led and mentored a **team of 2 engineers**, introducing modular architecture and independent QA workflows, **improving delivery speed and maintainability**.

📁 PROJECTS

GenAI Video Creation Platform

- Designed and built a **Python + FastAPI-based system** to generate **15-second ad videos in ~10 minutes each**, using LLM reasoning, semantic retrieval, STT/TTS, and FFmpeg, **cutting manual effort drastically**.
- **Enabled parallel video generation (10 concurrent jobs)**, designed for **horizontal scaling to 1000+ videos**

Unified Text-to-Speech Inference System (Github) 🔗

- Developed a **multi-engine TTS platform** supporting dynamic switching between engines like **KokoroTTS and ChatterboxTTS**.
- Achieved **low-latency inference (~10-20 ms)** with streaming support.

Comic Panel Extractor 🔗

- Built a **YOLO-based comic panel detection system**, enabling automated extraction via an end-to-end pipeline (dataset creation, annotation, training, inference)
- Developed **multi-interface tooling (CLI, web UI, REST APIs) with Docker deployment**, supporting scalable panel extraction

Offline Subtitle Generation Tool (SRTify) 🔗

- Built a **fully offline Whisper-based transcription system**, delivering **high-accuracy subtitles**.

🧠 SKILLS

Programming Languages — Python, Java, JavaScript

Backend & APIs — FastAPI, React, REST APIs, Microservices Architecture

Databases & Caching — PostgreSQL, MySQL, Redis

AI / ML — Generative AI, RAG, Agentic Workflows, Multimodal Pipelines, Computer Vision (YOLO), STT/TTS

DevOps & Tools — Docker, CI/CD Pipelines, Git

Systems & Performance — Scalable Systems, Low-latency Design, Caching Strategies

Engineering Practices — Agile (Scrum), CI/CD, RESTful design, modular architecture

🎓 EDUCATION

Velammal Engineering College, B.E Computer Science

08/2014 – 08/2018

- Won **Debugging Challenge** at a technical symposium
- Co-Developed an **aptitude quiz platform used by 50+ students** for campus placement preparation
